PDX Code Guild

Portland, OR

Projects

SMART SHOPPING CART

The Collab Lab Cohort 5, March 2020 to May 2020

<https://tcl-5-smart-shopping-list.netlify.app/>

Worked collaboratively with a group of 3 other developers, and created an app where you are able to create a shopping list of items. The user would be able to choose when a grocery item would need to be purchased next and the list would remind you of upcoming purchases. You are able to create a new list as well as join an existing list using a token that is entered and then stored in Local Storage.

Technologies used: React.js, GitHub, Firebase

NOMAD'S PAL

<https://www.nomadspal.com>

A crowd-sourced app that helps Digital Nomads and remote workers locate cafes and co-working spaces in the locations they are interested in. The site provides the location address as well as WiFi speeds experienced by other Nomads and remote workers.

Technologies used: React.js, Materialize, GitHub, Firebase
